INTRODUCTION

The Grievance Redressal System is a digital platform developed to efficiently manage and resolve complaints within an institution. It provides a centralized interface where students can submit their grievances, staff members can address and resolve issues, and administrators can monitor and manage the entire process. The system enhances transparency, improves communication, and ensures faster resolution through real-time tracking and updates.

PROBLEM STATEMENT

- Traditional grievance handling is manual and time-consuming
- Lack of a centralized platform for complaint management
- No proper tracking system for submitted grievances
- Delays in assigning and resolving complaints
- Poor communication between students, staff, and administration
- Lack of transparency in the resolution process
- Difficulty in maintaining records and history of complaints
- No real-time updates or notifications
- Increased chances of complaints being ignored or lost

OBJECTIVES

❖ The primary objectives of our Grievance Redressal System are to :

- ❑ develop a centralized platform for managing all grievances within the institution.
- ❑ enable easy submission of complaints by students through a user-friendly interface
- ❑ enhance transparency and accountability in the resolution process.
- ❑ provide role-based access for students, staff, and administrators.
- ❑ maintain a secure and organized database of all grievances.
- ❑ improve communication between students, staff, and admin.
- ❑ reduce manual effort and delays in handling complaints.
- ❑ ensure quick assignment and resolution of grievances.
- ❑ allow real-time tracking of complaint status.

SOLUTION OVERVIEW

- ❑ Centralized mobile and web-based platform for complaint management
- ❑ Easy grievance submission through a user-friendly interface
- ❑ Efficient admin panel to manage and assign complaints
- ❑ Role-based workflow for students, staff, and administrators
- ❑ Staff responsible for resolving issues and updating status
- ❑ Real-time tracking of complaint progress
- ❑ Ensures transparency in the resolution process
- ❑ Improves communication between students, staff, and admin
- ❑ Structured system to organize all grievances
- ❑ Reduces delays and manual effort in handling complaints

TECH STACKS USED

Frontend Technologies

- React Native (Expo): Used to build cross-platform mobile applications for students and staff
- React + Vite: Used for developing a fast and responsive admin web panel.

Backend & Services

- **Supabase (BaaS):**
 - Authentication (Login/Signup with role-based access)
 - PostgreSQL Database for structured data storage
 - Realtime API for instant updates
 - Storage for uploading images and documents

UI/UX & Styling

- Tailwind CSS: Utility-first styling for responsive UI.
- Custom Components: Reusable UI elements for consistency.

Libraries & Tools

- Recharts: Used for visualizing reports and analytics.
- Framer Motion: Adds smooth animations and transitions.

ADMIN DASHBOARD

The admin dashboard provides an overview of all grievance activities, including total, submitted, in-progress, and resolved complaints. It also displays charts for trends and status distribution, helping the admin monitor and manage the system efficiently.

CHALLENGES FACED

- Handling real-time data synchronization
- Managing multiple user roles and access control
- Backend integration using Supabase
- Debugging and resolving runtime errors
- Ensuring smooth communication between frontend and backend

RESULT & KEY FEATURES

RESULTS

- Structured complaint management system
- Multi-user access with defined roles
- Seamless complaint submission process
- Live status updates and notifications
- Secure user authentication

KEY FEATURES

- Reduced complaint resolution time
- Improved system efficiency
- Better coordination between users
- Organized and trackable complaint records
- Enhanced user experience

CONCLUSIONS

The Grievance Redressal System successfully addresses the limitations of traditional complaint handling by providing a centralized, efficient, and transparent platform. It enables seamless interaction between students, staff, and administrators, ensuring faster resolution of grievances. The system improves accountability through real-time tracking and structured workflows, reducing delays and manual effort. Overall, it delivers a reliable and scalable solution that enhances institutional grievance management.
